Microdermabrasion

A treatment using a minimal abrasive instrument to gently sand your skin, removing the thicker, uneven outer layer. This type of skin rejuvenation is used to treat light scarring, discoloration, and sun damage.

Hydro Peel

The vibration of water will cause microburst of dead cells, emulsify and break up debris in the pores. This process is totally non-invasive and can be used on the most sensitive skin. The result can be remarkable, an instant clearing and smoothing effect can be observed.

Ultrasound

Small doses of ultrasound can promote the synthesis of protein inside the cell. This helps to regenerate wounded tissue and promote synthesis of new fiber cells. This in turn facilitates the absorption of induced products.

Dermaplaning

Is a simple and safe procedure for exfoliating the epidermis and ridding the skin of fine vellus hair (peach fuzz). No, it does not cause man beard. Your hair will return to its normal color, coarseness and thickness. This treatment has been used for many years.

Microneedling

Also known as Collagen Induction Therapy. The pen creates controlled micro-injuries to the skin in order to naturally produce collagen and elastin. The skin's repair process results in improvement of the appearance of softer wrinkles. These micro chemicals can be used with typical gel creams and serums to help improve the appearance of the epidermal layer of the skin.
